GRADES

PRIME | Clean Grade
Prime grading provides an overall clean and uniform appearance, though it's not completely flawless. Expect minimal pin knots and slight color variation, offering a refined yet natural look. This grade is ideal for spaces where a sleek, polished aesthetic is desired without sacrificing authenticity.

NATURE | Light Character
Nature grading balances character and simplicity. With some knots and natural variations, it introduces warmth and charm while maintaining versatility. This grade complements a wide range of interior styles, from modern to traditional and everything in between.

NATURE+ | More Character
Nature+ grading is full of personality and rich character. With more pronounced knots and textures, it brings depth and a unique aesthetic to any space. Its bold look works seamlessly in diverse design styles, offering endless creative possibilities.

STRUCTURE

All products are square-edge, with custom beveling options available.

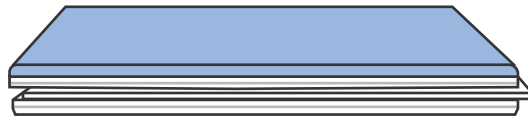

Thickness: 3/4" or 19mm
Wear Layer: 4mm

Thickness: 5/8" or 15mm
Wear Layer: 4mm

Thickness: 3/4" or 18mm
Wear Layer: 6mm

Thickness: 1/2" or 12mm
Wear Layer: 3mm

STRUCTURE

Eucalyptus Plywood Core

Sustainable Resource & Environmental Friendliness:
Reaching maturity in just 5-7 years, making it an excellent renewable resource.

Strength and Stability:
High density and hardness, properly treated, it ensures dimensional stability.

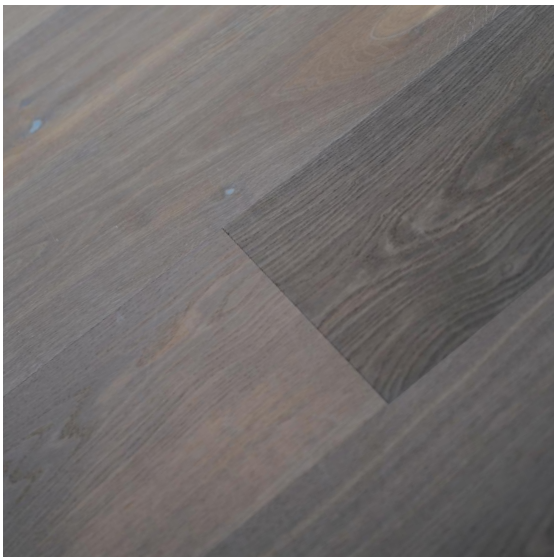

Insect Resistance: Natural pest-deterring compounds and dense structure protect against termites and wood-boring insects, improving durability.

Adhesive Compatibility:
Eucalyptus wood bonds well with adhesives and finishes, ensuring strong connections between layers and durability over time.

PRIME | Clean Grade

SMOKED | Nature Grade

PRIME

European White Oak

Prime grade engineered hardwood indicates product that is mostly free of imperfections such as knots and mineral streaks, contributing to an overall clean, light, and consistent appearance.

SMOKED

NATURE

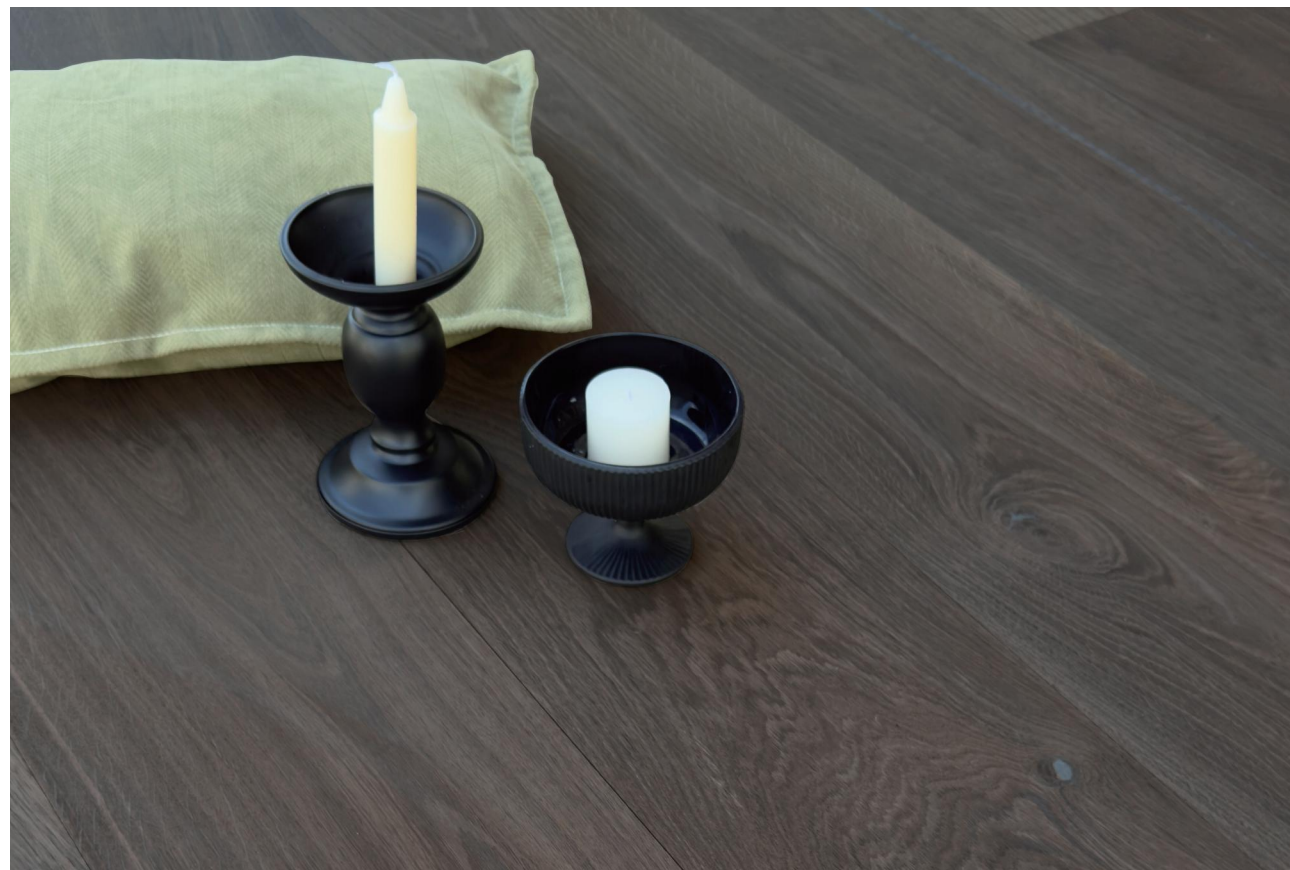

Smoked hardwood flooring undergoes an ammonia vapor treatment that reacts with the wood's natural tannins, creating deep, rich tones and unique grain patterns without the use of surface stains. This process enhances the wood's natural beauty, with color penetrating deeply to make scratches less visible over time, adding a sophisticated, timeless aesthetic to any space.
